

ORENDALIS

The Executive Hiring Process Is Broken

Episode 1 production package

CREATIVE THESIS

The problem is not a shortage of jobs. The problem is a shortage of intelligence.

Master film: 84 seconds | Primary channel: LinkedIn | Language: English | Version: 1.0

Prepared for production · 21 July 2026

1. Creative concept

The Missing Layer

Executives already have access to jobs, recruiters, networks, documents, calendars, notes and advice. What they lack is a coherent intelligence layer that turns fragmented evidence into a defensible decision. Episode 1 exposes that gap before Orendalis appears.

AUDIENCE REALIZATION

I have not been managing a career. I have been managing fragments.

The film is a category manifesto, not a product tour. It makes the broken system feel familiar, compresses its hidden cost into one escalating sequence, then introduces Executive Intelligence as the missing alternative.

Strategic objective

- Stop an executive within the first three seconds through recognition, not spectacle.
- Replace passive familiarity with discomfort: the old workflow should suddenly feel unacceptable.
- Earn the Orendalis reveal only after the viewer understands the category problem.
- Leave one durable message: most platforms help people apply; Orendalis helps executives decide.

Success test

A successful viewer does not merely remember the product. They can repeat the argument in their own words: executive hiring is fragmented, application volume is not intelligence, and important career decisions deserve evidence, context and continuity.

2. Film treatment

Recognition

We enter on a black screen with the soft mechanical sound of a cursor. A familiar sentence appears: "Looking for your next executive role?" It is deleted before the viewer can settle. The correction lands: "That's not the real problem."

Frustration

The screen becomes a controlled accumulation of fragments: job tabs, recruiter messages, CV filenames, saved links, spreadsheet cells, interview notes and compensation research. Nothing is shown as a literal collage for long. Each fragment arrives cleanly, then competes for attention until the system becomes visually impossible.

Curiosity

The noise stops. One line remains: "The problem isn't access." A second line resolves beneath it: "It's intelligence." The soundtrack opens; space returns.

Relief

For the first time, the camera moves through a coherent system. Company Intelligence, Opportunity Intelligence, Atlas and the Executive Workspace appear as connected evidence—not as a feature montage. The interface remains readable but never fully explained.

Vision

The film leaves the interface and returns to black. The category arrives first, followed by the brand. The final impression is not software. It is a more serious standard for executive decisions.

3. Master structure and timing

Time	Movement	Picture	Purpose
00:00–00:03	Interruption	Cursor. Familiar question typed, then deleted.	Stop the scroll.
00:03–00:09	Recognition	The correction replaces it.	Reframe the problem.
00:09–00:26	Fragmentation	Career tools accumulate with increasing tempo.	Create productive discomfort.
00:26–00:36	Cost	Tabs freeze; key facts contradict or disappear.	Make fragmentation consequential.
00:36–00:45	Pivot	Noise collapses into two sentences.	Name the missing layer.
00:45–01:07	Intelligence	Connected Orendalis evidence and decision views.	Demonstrate relief without teaching.
01:07–01:17	Difference	Apply versus Decide contrast.	Own the category distinction.
01:17–01:24	End card	Category, mark, brand and URL.	Create memory and action.

Pacing law

The first half accelerates; the second half breathes. Fragmentation is cut on rhythm. Intelligence is revealed through slower, deliberate motion. The viewer must feel the difference before it is described.

4. Final voiceover

PERFORMANCE

Cinematic English narrator. Calm, observant and certain. Direct each thought independently. Never perform urgency; let the edit create it.

Looking for your next executive role?

That's not the real problem.

The roles are everywhere.

LinkedIn. Job boards. Recruiters. Company sites.

But the truth about a career decision lives somewhere else.

In a CV version. A saved link. An interview note. A salary file. A conversation you meant to revisit.

More access created more fragments. Not more clarity.

Because the problem isn't a shortage of jobs.

It's a shortage of intelligence.

What if every opportunity arrived with context?

Why it fits. Why it may not. What is confirmed. What is unknown. What deserves your attention next.

That is Executive Intelligence.

Most platforms help people apply.

Orendalis helps executives decide.

The executive hiring process is broken.

It's time to expect better.

Estimated spoken duration: 71–76 seconds, leaving 8–13 seconds for pauses, silence and the final card.

5. Shot-by-shot storyboard

01 · 00:00–00:03

PICTURE Black field. A white cursor blinks twice. “Looking for your next executive role?” types in, then is selected.

WORDS VO: Looking for your next executive role?

SOUND Dry keystrokes. No music.

02 · 00:03–00:09

PICTURE The sentence deletes. “That’s not the real problem.” appears one phrase at a time. Hold one full second.

WORDS VO repeats the correction.

SOUND A low sub pulse enters after “problem.”

03 · 00:09–00:15

PICTURE Three precise browser-tab silhouettes slide into a dark spatial plane: LinkedIn, job board, company careers. No third-party logos needed.

WORDS The roles are everywhere...

SOUND Tempo begins at 74 BPM.

04 · 00:15–00:26

PICTURE Fragments multiply: recruiter email subject, CV_v12_FINAL.pdf, spreadsheet cells, bookmarked role, interview note, calendar hold.

WORDS But the truth... lives somewhere else.

SOUND Each fragment gets a distinct tactile click.

05 · 00:26–00:36

PICTURE Camera pulls back. The fragments form an impossible field. Two salary figures disagree; a role closes; an important note falls outside frame.

WORDS More access created more fragments...

SOUND Pulse tightens; high-frequency texture rises.

06 · 00:36–00:45

PICTURE Everything cuts to black. “NOT A SHORTAGE OF JOBS.” appears, then refines to “A SHORTAGE OF INTELLIGENCE.”

WORDS Because the problem isn’t...

SOUND Complete silence for 12 frames before the second line.

07 · 00:45–00:52

PICTURE A single mint origin point appears. Quiet Ascent path draws upward. A clean Opportunity Intelligence card resolves around it.

WORDS What if every opportunity arrived with context?

SOUND A warm harmonic bed opens.

08 · 00:52–00:59

PICTURE Company Intelligence: evidence, freshness and unknowns enter in three layers. Confirmed / Estimated / Unknown remain visually distinct.

WORDS Why it fits. Why it may not...

SOUND Slow, soft UI ticks.

09 · 00:59–01:07

PICTURE Atlas recommendation panel reveals reasons for, reasons against, confidence and next action. Cursor rests; no chat typing spectacle.

WORDS What deserves your attention next.

SOUND Music reaches emotional clarity, not a climax.

10 · 01:07–01:13

PICTURE Split screen. Left: APPLY, repeated and receding. Right: DECIDE, singular and stable.

WORDS Most platforms help people apply...

SOUND One restrained impact on “decide.”

11 · 01:13–01:17

PICTURE The Orendalis system recedes into a quiet horizon. “THE EXECUTIVE HIRING PROCESS IS BROKEN.”

WORDS The executive hiring process is broken.

SOUND Music strips back to the opening pulse.

12 · 01:17–01:24

PICTURE Black. Executive Intelligence. Quiet Ascent mark. ORENDALIS. orendalis.com. Fade in that order.

WORDS It's time to expect better.

SOUND Resolve; leave 18 frames of silence after fade.

6. On-screen text

Use text as argument, not captions. Never display more than nine words in a statement frame. Preserve silence around the strongest lines.

Cue	Text	Treatment
00:00	Looking for your next executive role?	Typed; deleted
00:04	That's not the real problem.	Centered; 1.2 s hold
00:37	NOT A SHORTAGE OF JOBS.	Condensed tracking; 0.8 s
00:40	A SHORTAGE OF INTELLIGENCE.	Primary thesis; 2.0 s
00:54	CONFIRMED / ESTIMATED / UNKNOWN	Evidence-state microtype
01:08	APPLY	Left; repeated
01:10	DECIDE	Right; singular
01:14	THE EXECUTIVE HIRING PROCESS IS BROKEN.	Final argument
01:18	EXECUTIVE INTELLIGENCE.	Category reveal
01:20	ORENDALIS	Brand reveal
01:22	orendalis.com	Action

7. Visual identity

Typography

- Primary: Geist Sans Variable. Headlines use 520–620 weight, tight optical spacing, never all-caps except thesis frames.
- Evidence and system labels: Geist Mono, 11–14 px equivalent, generous tracking.
- Fallback: Inter Variable and IBM Plex Mono. Do not mix more than two families.

Color palette

Token	Value	Use
Obsidian	#070A0F	Negative space and manifesto frames
Deep ink	#0B1220	Interface stage and brand field
Signal white	#F7F9FC	Primary language
Decision blue	#6D8CFF	Connections and intelligence
Evidence mint	#7DE2C6	Confirmed facts and origin point
Warm stone	#E8DFD3	Human warmth; maximum 10% of frame

Token	Value	Use
-------	-------	-----

The Quiet Ascent mark

Use only in Scene 7 as an abstract path and in the final brand reveal. Never open with it. Never animate it as a generic loading spinner. Its motion is a deliberate upward decision path originating from the executive—the mint point—not a symbol of speed.

8. Motion and camera language

- Camera: controlled 2.5D depth, 35–50 mm virtual lens, slow lateral moves, no dramatic orbiting.
- Fragment phase: 6–10 frame entrances, hard editorial cuts, shallow depth changes, increasing density.
- Intelligence phase: 16–24 frame eased entrances, aligned grids, stable horizon, readable evidence.
- Easing: custom cubic 0.22 / 1 / 0.36 / 1. Avoid bounce, elastic motion, parallax excess and cursor chasing.
- Transitions: deletion, match cuts, controlled collapse and evidence-line draws. No zoom tunnels or glitch presets.
- Texture: 1–2% monochromatic grain; subtle bloom only on blue and mint signal elements.

9. Music and sound

Music direction

Minimal electronic score at approximately 74 BPM. Start with a dry sub pulse and a faint mechanical texture. Introduce warm, sustained harmony only when intelligence replaces fragmentation. The score should feel designed, not emotionalized.

- Search terms: minimal electronic documentary, restrained pulse, modern design film, warm analog resolution.
- Avoid: trailer rises, cinematic booms, inspirational piano, corporate ukulele, heroic strings and vocal samples.
- License: use an original composition or a commercial track with worldwide paid-social and perpetual brand-film rights.

Sound design

Build a small sonic vocabulary: cursor, keystroke, document latch, evidence tick, low pulse and a single decision impact. Every sound must correspond to an action or change in meaning. Silence is an authored element in Scenes 2, 6 and 12.

10. UI capture direction

Use real Orendalis interface states and truthful data. Capture at 4K or higher, 100% browser zoom, no browser chrome, no personal data and no invented employer claims. Replace sensitive information with purpose-built fictional production records clearly isolated from production data.

Required captures

- Opportunity Intelligence: one role with confirmed evidence, a visible unknown and a meaningful confidence explanation.
- Company Intelligence: freshness, provenance and hiring evidence—not fabricated financial or cultural claims.
- Atlas: reasons for, reasons against, unknowns, confidence and one recommended next action.
- Executive Workspace: continuity from evidence to decision; show Pursue / Watch / Skip only if legible.
- Executive Rooms: at most a one-second atmospheric glimpse; never turn the film into a collaboration demo.

Capture rule

TRUTH OVER SPECTACLE

If a UI state cannot be shown truthfully, omit it. The film may compress time and space; it may never fabricate evidence or outcomes.

11. AI image and video prompts

These prompts create atmospheric connective tissue only. Product UI must be captured from the actual application.

Fragment field

PROMPT Dark editorial 3D space containing restrained floating browser tabs, document edges, calendar blocks and spreadsheet cells; premium product-film lighting; obsidian background; white typography fragments; periwinkle signal lines; subtle grain; no people; no logos; 16:9.

NEGATIVE No holograms, robots, neon cyberpunk, stock-office imagery, readable third-party brands or clutter.

Collapse to clarity

PROMPT Thousands of thin information planes align into one precise horizontal evidence line; black cinematic field; slow deliberate movement; architectural composition; soft periwinkle and mint light; elegant, minimal, high contrast; 16:9.

NEGATIVE No explosions, vortexes, speed ramps, lens flares or sci-fi interfaces.

Intelligence horizon

PROMPT A single mint origin point connects through a restrained ascending path into calm evidence cards on a deep ink horizon; premium editorial motion design; precise grid; subtle depth; quiet confidence; 16:9.

NEGATIVE No charts without labels, no fake data, no glowing brain, no humanoid AI.

End-card texture

PROMPT Near-black field with barely visible warm stone material texture, controlled falloff, central negative space for white typography and logo, premium film grain, no objects, 16:9.

NEGATIVE No gradients that reduce text contrast, no visible symbols or text.

Video generation instruction

Generate 6–8 second plates at 24 fps with locked or extremely slow camera movement. No text generation. No autonomous scene cuts. Preserve negative space for typography. Produce two motion intensities: controlled and almost still. The editor—not the model—determines timing.

12. Editorial instructions

- Master timeline: 3840×2160, 24 fps, 48 kHz audio, 84 seconds.
- LinkedIn delivery: 1920×1080 and 1080×1350. Recompose, do not crop mechanically.
- Captions: burned-in optional version plus SRT. Sentence case, maximum two lines, WCAG-level contrast.
- Brand reveal must not occur before 00:45. Logo must not appear before Scene 7.
- UI must remain on screen long enough to understand one idea, not to read every field.
- Cut any shot that exists only to prove a feature. Preserve argument, tension and relief.
- Export review masters in ProRes 422 HQ; web masters in H.264 high profile, 15–25 Mbps.

13. Thumbnail concepts

Concept	Composition	Use
The correction	Black field. Small deleted line: LOOKING FOR A ROLE? Large white line: THAT'S NOT THE REAL PROBLEM.	Highest curiosity; recommended.
The category problem	Fragmented tabs recede into darkness. Center statement: NOT MORE JOBS. MORE INTELLIGENCE.	Best for message clarity.
Apply / Decide	Vertical split. APPLY repeats in gray on left; DECIDE stands alone in white and mint on right.	Best for category differentiation.

Recommended thumbnail

Use “The correction.” It continues the opening device, creates an unresolved question and does not depend on brand recognition. Keep the logo off the thumbnail unless platform testing proves recognition improves completion rate.

14. LinkedIn launch copy

OPENING LINE

Executives do not have a job-access problem. They have an intelligence problem.

For years, we have accepted a fragmented way of managing executive careers.

Jobs in one place. Recruiter conversations in another. CV versions, interview notes, company research, salary files and decisions scattered everywhere else.

More access did not create more clarity.

Because the problem is not a shortage of jobs. It is a shortage of intelligence.

Most platforms help people apply.

ORENDALIS helps executives decide.

Today we are introducing a different category: Executive Intelligence.

Watch Episode 1: The Executive Hiring Process Is Broken.

orendalis.com

Recommended post treatment

Upload the video natively. Use the first sentence before the fold. Do not list features. Do not use more than three hashtags; preferred: #ExecutiveIntelligence #Leadership #Careers. Founder commentary should be the first comment, not appended to the launch copy.

15. Production plan

Stage	Work	Acceptance	Output
1	Voice direction	Build the narration as individually directed thoughts with deliberate silence.	Clean 48 kHz WAV
2	Animatic	Build timing with typography, temp UI and temp score.	84-second approval cut
3	UI capture	Capture only approved truthful states after animatic lock.	4K lossless plates
4	Motion design	Create fragmentation and intelligence systems as reusable comps.	Picture-lock candidate
5	Sound	Original score, action-based sound design and final cinematic narration.	Stereo mix + stems
6	Finishing	Grade, captions, legal/source review, mobile safe-zone review.	Master + social exports
7	Validation	Test first 3 seconds, thesis recall and completion with executives.	Go/no-go evidence

Voice recording notes

- Record in a quiet, non-reflective room; microphone 15–20 cm from speaker, slightly off axis.
- Do not imitate a commercial narrator. Speak to one respected executive across a table.
- Underline only five words in performance: problem, fragments, intelligence, apply, decide.
- Keep breaths where they carry thought. Remove mouth noise, not humanity.

Legal and trust review

- Use no third-party trademarks or platform screenshots without permission; abstract the fragmented sources.
- Use only licensed music, typefaces and generated assets with documented commercial rights.
- Do not imply employment outcomes, employer partnerships, application automation or guaranteed recommendations.
- Validate every product claim against the live application before picture lock.

16. Acceptance standard

Gate	Pass condition
Three-second stop	Viewer can state the interrupted question or correction after one viewing.
Problem recognition	Viewer describes fragmentation before mentioning features.
Category clarity	Viewer understands Executive Intelligence as evidence-backed decision support.
Trust	No unsupported fact, fabricated UI evidence or exaggerated outcome appears.
Emotional arc	The second half feels calmer and more coherent than the first.
Brand timing	Orendalis reveal feels earned and occurs only after the thesis.
Mobile legibility	All critical text remains readable at 390 px width and in 1080×1350 delivery.
Message recall	Primary recall: “The executive hiring process is broken.”

FINAL CREATIVE TEST

If removing the Orendalis logo still leaves a film executives want to share, the message is strong enough. Then—and only then—does the brand earn the ending.

17. Episode 1 identity rules

These rules exist only to keep Episode 1 coherent and reusable. They are not production work for later episodes.

- Begin with a human truth, never a product claim.
- Use black as thinking space, not as a fashionable dark theme.
- Let tension accelerate and intelligence decelerate.
- Use blue for connection, mint for confirmed evidence and white for argument.
- Keep the narrator calm, specific and free of startup language.
- Reveal the category before the brand; reveal the brand before the URL.
- End with a statement worth remembering, not a list of features.

No future episode has been scripted, storyboarded or produced in this package.

EPISODE 1 FINAL LINE

THE EXECUTIVE HIRING PROCESS IS BROKEN. IT’S TIME TO EXPECT BETTER.
